

Exploring Hotels near a famous Motel during Vacation🏠

People have come to the favorite vacation place in the country - Coimbatore which is a city in southern INDIA.

People want to explore for hotels near a motel that they are staying

So I have got the information of all the hotels near the motel using the foursquare API and used it to construct the map using FOLIUM MAPS

This is kind of the concept/idea behind Google Maps.

Problem Being Solved:

Providing data of all the hotels/restaurants in the same pin code(area) of that of the Motel

TARGET AUDIENCE:

All tourists and travelers can make use of the system to know about the hotels in their specific residing location

.

APPROACH:

Get the location data from Foursquare Database

Map the user's location and also map the corresponding locations of the hotels and restaurants in the same pin code/locality.
